

Female, Neurological and Urodynamic Urology

Female, neurological and urodynamic urology (FNUU) is the sub-specialty of urology which covers the investigation and treatment of benign conditions of the lower urinary tract. It also encompasses related problems within the female genital tract.

The particular focus of the sub-specialty is on disorders of function and on inflammatory conditions affecting these systems. A major component of the subspecialty is neurological urology which covers the management of patients with neurological conditions that have an impact on urinary tract and sexual function; neurological urology encompasses both static conditions, such as spinal cord injury and stroke, as well as progressive disorders, such as multiple sclerosis and Parkinson's disease.

The Annual Meeting of the Section will take place during the BAUS Annual Meeting in Glasgow (on 25 June 2012 at 10.00hr) - click on the highlighted link below for further information.
